

Mike Moschitto

Incline Village, NV · mikemoschitto@gmail.com
mikemoschitto.com · linkedin.com/in/michaelmoschitto · github.com/michaelmoschitto

Generalist engineer on an Applied Engineering R&D team who shifts rapidly between problem spaces - agents, full stack, databases, cloud infrastructure. Energized by delivering outcomes from ambiguous problem statements.

SKILLS

Languages/Frameworks: TypeScript, Kotlin, Python, Node, Bun, React, FastAPI, Express, Next.js

Infrastructure & Data: AWS, Docker, PostgreSQL, Redis, Singlestore, LocalStack, Railway, Vercel, Supabase

Agent & LLM Systems: LangChain/LangGraph, OpenAI/Anthropic, Multi-Agent Orchestration, Memory Systems, Streaming Implementations, Browser Interaction

EXPERIENCE

Ridgeline Software Engineer II - Applied Engineering, AI Platform

2022 - Current

- Democratized and scaled performance and UI testing to uncover 100+ bugs across 25+ teams by building Autopilot, a platform for natural-language test scenarios executed by autonomous browser agents. **[Node, React, TS/JS, AWS, Vite, Electron]**
- Delivered flagship AI demo - a Data Analyst agent (>80% first-pass accuracy) for secure Python execution, platformized LLM streaming, and chain-of-thought UI for reasoning transparency. **[Kotlin, Python, Postgres, Pandas, React, OpenAI]**
- Unblocked database team's roadmap by owning end-to-end delivery of a Postgres performance testbench - replayed production traffic, benchmarked look-aside caching, and surfaced slow query patterns and p95/p99 latency.

Ridgeline Software Engineer I - Performance & Scale

- Proved multi-agent architecture for future AI products by building a 6-agent Slack based orchestration system with long term memory, safety filtering, and hierarchical routing. **[Langchain/Langgraph, Typescript, Redis, AWS, OpenAI]**
- Reduced reliance on \$5k/month tenants and accelerated developer iteration by building a LocalStack based development kit to validate IaC changes and run cloud microservices locally. **[LocalStack, Bash, Docker, AWS, Python]**

Ridgeline Software Engineering Intern

- Built a data-agnostic PDF generation service to automate report creation from definitions, eliminating formatting overhead.

Mezo Full Stack Engineer

2024 - 2025

- Processed 1000+ cashless transactions for Mezo customers by shipping an NFC payment system from ambiguous requirements to production as freelance engineer - mobile signup with automated card recognition, real-time vendor POS, and customer display. **[Next.js, Supabase, shadcn, Electron, Typescript]**
 - Drove 500+ signups for Mezo's Bitcoin wallet launch by building a referral-driven giveaway platform with social incentives, real-time leaderboards, and full internationalization.
-

PERSONAL

mike-os-x

- Built a MacOS-like desktop environment in the browser with multi-window management, WebSocket-backed Linux terminal, and shareable URL-first state. Used as a testbed to inform preferred agentic coding workflows. **[Typescript, Python/FastApi, Redis, EC2, Docker, Vite, Tailwind, Tanstack]**

Give With Gifted

- Reduced infrastructure costs by 70% to drive the business to profitability after acquiring and co-operating a Shopify application and refactoring the codebase. **[JS, Railway, AWS, Shopify, Mercury]**

Twitter Alpha Bot

- Generated ~60k Twitter views building a Claude powered pipeline for on-chain token intelligence, orchestrating multi-step web search → generation → Tweet publishing flows with retryable, prioritized job execution.

Cal Poly DxHub Powered by AWS

- Reduced incident response time to seconds for school safety teams by designing an end-to-end CV pipeline for fight detection (93% accuracy, 83% precision) - deployed as POC at Colorado school to alert administrators with incident images **[S3, Sagemaker, SNS, ECS]**
 - Accelerated World Bank PPP calculations from years to days by building an NLP tool (Python, React, spaCy) that automates like-with-like product matching across international datasets.
-

EDUCATION

Cal Poly San Luis Obispo - MS & BS Computer Science, 4.0 GPA

- Thesis: Effects Of Concussion And Visuomotor Metrics On NHL Performance: An Explainable AI Approach
- Delivered research presentation at the International Conference on Artificial Intelligence, Computer, Data Sciences and Applications (AICDA 2025)
