Summary

Full-stack product engineer who owns ambiguous features from concept to production, with expertise in backend systems and infrastructure. Passionate about delightful products, AI/ML, and thoughtful interfaces for complex systems.

Skills

Languages & Frameworks: TypeScript, Python, Kotlin, Hono, FastAPI, React, Next.js
Technologies: Postgres, Redis, Supabase, Playwright, Vite, Tailwind, shadcn, Okta, Auth0
Cloud Services: AWS, Railway, Vercel

Experience

Ridgeline 2022 – Present

Senior Software Engineer – Applied Engineering *Apr 2026 – Present*

- Grew Autopilot users 250% across five product areas by building an AI-powered platform for browser automation testing from natural language.
- Led a cross-org program with Security to run Autopilot on prod customer data, re-architecting auth from Auth0 to Okta OIDC.
- Grounded agent outputs in proven patterns with a Redis-queued embedding pipeline and hybrid vector/lexical search over Postgres.
- Enabled distributed tracing across Autopilot end to end, from browser client through API to virtual browser pool, and shipped Datadog dashboards as code.
- Increased productivity on a growing workflow library by shipping a global search command palette and version history.

Software Engineer II – Applied Engineering, AI Platform *Sep 2024 – Apr 2026*

- Achieved 80% first-pass accuracy by delivering the company's flagship AI demo.
- Shipped Ridgeline's first code execution system for AI agents by building an air-gapped multi-region AWS network with PrivateLink-only internal access.
- Unblocked the database team's scaling roadmap by building a Postgres testbench to replay production traffic, expose slow queries, and compare cache strategy tail latencies.

Software Engineer I – Developer Experience, Performance & Scale *Jul 2023 – Sep 2024*

- Proved multi-agent architecture for future AI products by building a 6-agent Slack-based orchestration system with long-term memory, safety filtering, and hierarchical routing.
- Cut $5K/month in cloud spend and shrank infrastructure feedback loops from a full deploy cycle to minutes with a LocalStack local development environment.

Software Engineering Intern *Jun 2022 – Aug 2022*

Mezo
Full Stack Engineer (Contract)

- Processed 1,000+ transactions by shipping an NFC payments product concept-to-launch: mobile onboarding, real-time point of sale, and a customer-facing display.
- Drove 500+ signups for a wallet launch with a multiplatform referral and leaderboard site.

Personal

- **mike-os-x:** Built a macOS-like desktop environment in the browser: multi-window management, a WebSocket-backed Linux terminal, and URL-first shareable state; a testbed for agentic coding workflows.
- **Give With Gifted:** Took an acquired Shopify application to profitability by cutting infrastructure costs 70%.
- **Twitter Alpha Bot:** Generated ∼60K views with a Claude-powered pipeline orchestrating multi-step search, generation, and publishing with retryable, prioritized jobs.

Education

Cal Poly San Luis Obispo
MS & BS Computer Science, 4.0 GPA

- Thesis: Effects Of Concussion And Visuomotor Metrics On NHL Performance: An Explainable AI Approach
- Delivered research presentation at the International Conference on Artificial Intelligence, Computer, Data Sciences and Applications (AICDA 2025)
